## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim 1-12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tognazzini in view of Buchanan.

The primary reference teaches a method for keeping expenses in an Internet expense account comprising: swiping a card having a person's email address on said card through a card reader; entering information about said expense into said card reader; sending said information automatically and directly into fields of an electronic mail box.

The reference fails to entering information about a second expense into said card reader; sending said information automatically and directly into fields of said Internet expense account where said expense was entered without manual intervention.

The secondary reference teaches of sending the receipt information directly into fields of a dedicated expense account. It would have been obvious for one skilled in the art at the time to have combines the references as motivated by the need to monitor the expenses of the employee (see claim 11).

Art Unit: 3693

The deletion step would have been obvious for one skilled in the art as motivated by the need to reduce fraud.

The step of wireless communication would have been obvious for one skilled in the art as motivated by the need to work wireless input devices (e.g., rental car companies).
